

**Learning Target 2: I have the basic knowledge required to confidently diagnose and manage osteomyelitis.**

**ETALO team will write different versions of pre- post tests here to assess knowledge**

<b>SKILLS:</b>	<b>EMERGING</b> <i>(I am just getting started on this skill)</i>	<b>APPROACHING</b> <i>(I am still developing this skill)</i>	<b>MEETS</b> <i>(I am competent and confident in this skill)</i>
<b>Understand (use?) basic knowledge (terminology, anatomy, and pathophysiology) related to osteomyelitis</b>	I am starting to learn basic knowledge about osteomyelitis.	I understand most basic knowledge about osteomyelitis.	I am confident in my basic knowledge about osteomyelitis.
<b>Diagnose osteomyelitis</b>	I am starting to learn to evaluate and diagnose osteomyelitis.	I can correctly evaluate and diagnose osteomyelitis most of the time.	I am confident in my ability to correctly evaluate and diagnose osteomyelitis.
<b>Manage osteomyelitis</b> Understanding basic anatomy of osteo (sequestrum, involucrum, abscess, cloaca, sinus)	I know basic concepts...	I can identify the clinical and laboratory findings of acute and chronic osteomyelitis. Can clearly identify on xray the anatomical findings of chronic osteomyelitis.	I can prepare a treatment plan based on findings to care for the patient's current condition.
<b>Provide post-operative care</b>	Be able to provide basic instructions for nursing staff and patient/family for post-op care	Be able to monitor for and identify post-operative complications.	Be able to address complications that may arise from injury/treatment
