

CF Stoves in USA

In the USA many rocket stoves are now being made but few yet use ceramic fiber board or blanket.

Below are some examples of the use of CF board.

See other pdf for working CF stoves

One can buy a kit there to make a stove but most are quite elaborate, as below, to allow a steady feed of wood fuel

In Africa, CF board or blanket can be used in various ways for improving stoves. Ask for information.

Using CF board allows for the basic wood burning to be done inside the insulation so protecting any clay covering surrounds from overheating and cracking!
