DISABILITY RAMP

Assembly

Step 1

Lay out all the Sloped Timber and Joists. Position the Joists in the middle of each sloped Timber. All Joists must be 400mm from the tip of the higher end of the sloped timber.

Step 2

Move the Middle Joist backward. The right tip of the middle joists should be aligned to the left tip of the other two outer joists. Screw each end into the sloped timber that it is attached to.

Step 3

Place the ply board on top and screw it to the sloped timber.

Step 4

Paint it with a disability symbol if needed.
