

ALL-SAFE Trocar Placement: Psychomotor Skills Assessment					
Tasks		Yes	No	Comments	
Makes appropriately sized skin incision for supplied trocar in supraumbilical skin					
Dissects through subcutaneous tissue to fascia with scissors					
Grasps and elevates fascia with clamp					
Sharply enters fascia with blade (do not use 11 blade)					
Avoids cutting through rectus muscle					
Grasps and elevates peritoneum with forceps or clamps					
Avoids grasping bowel when elevating peritoneum					
Sharply enters peritoneum with blade or scissors					
Performs adequate finger sweep marked by learner showing lipstick on glove					
Places suture on both sides of fascia leaving strands long enough to tie					
Places port into peritoneal cavity and adequately secures with suture					
Avoids injury to bowel (shows intact bowel at end of procedure)					
Global					
Respect for Tissue	1 Frequently used unnecessary force on tissue or caused damage by inappropriate use of instruments	2	3 Careful handling of tissue/occasionally caused inadvertent damage	4	5 Consistently handled tissue appropriately with minimal damage
Economy of Time and Motion	1 Many unnecessary / disorganized movements	2	3 Organized time / motion, but some unnecessary movements	4	5 Economy of movements and maximum efficiency
Instrument Handling	1 Repeatedly made tentative or awkward moves with instruments	2	3 Competent use of instruments/occasionally appeared stiff or awkward	4	5 Fluid moves with instruments and no awkwardness
Flow of Operation	1 Frequently stopped operating and seemed unsure of next move	2	3 Demonstrated ability for forward planning with steady progression of operative procedure	4	5 Obviously planned course of operation with effortless flow from one move to next
Overall Performance	1 Undeveloped	2	3 Competent	4	5 Master
Final Rating: Does this participant demonstrate competency? (<i>choose only one</i>)			Other Summative Comments:		
Yes Borderline No
