

Charlie D. Danduan

Grade 11 – Kansha

ETECH or Empowerment technologies, is a very challenging subject to me. It is because of all the things that we did during the whole semester. When it comes to ETECH, the first thing that comes in my mind is that it really involves using lots of technologies and I'm not really good when it comes to this kind of things and also has a positive and negative effects on me. Negative because on facing a lot of school works or projects in school, sometimes, it gives us a hard time and makes us suffer especially when it comes to deadlines. But on every project that we encounter can also give us a very important lesson that only you can understand. Easy projects can be done in one day but sometimes there projects that could take more than a day to finish especially the hard or the difficult ones. I also learn that by the help of ETECH, it helps us know how important ICT is. I also learn how to become a wise person especially on dealing with social media. Passing a very difficult project on time is one of the most challenging moments that I experience in my life especially if you only have few types of equipment that are needed on making a projects like computers and internet.

The most powerful moments that I experience during ETECH, is to become a speaker in front of many audience and able conduct a seminar to different kinds of people that depends on their level. Due to my stage fright, difficulty on staying in front or having an eye contact to someone for a long period of time, are the hindrance that enables me to perform well. But when I begun to set aside those things and began to speak without hesitation, it slowly helps me to be more confident and able to communicate with the audience. Personally, I realize that on making your assignments, don't hesitate to make your assignments early as soon as possible and don't wait until it reaches the deadline so that we can avoid cramming in the end. On facing a very difficult task or a ultimate problem, I realize, that the best way to solve this things is to look for the possible answers that has a very big advantage to us. And this answer can be use to all the problems that we can encounter in the real world situations. Because in life we have many choices and on each choices there are many possible answers and questions.

I am really satisfied based on our performance as a group, because we are able to work as a team when we are dealing with a difficult problem, sometimes we have small arguments like on choosing the right title or main topic. But overall we still come up with an idea that is in favor to all members. But not all members are able to help the team, because others may be out of ideas or solution to find a way to solve a certain problem.
