

Sustainable Cooking Methods Workshop

HSU's ENGR 305 Class will be presenting a workshop at the Jefferson Community Resource Center. Here we will instruct, create and discuss retained heat cookers. These methods will help save money on gas/electric, help reduce pollutants from indoor cooking processes, and provide more free time for the chef. The first 15 people/families will receive all the material for their cooker. A list of materials will also be provided

Saturday, April 13, 2013
