

Culvert Sizing Project: Shasta, CA

Prepared by Brayden Leach

December 12th, 2019

Introduction

This report was prepared for Engineering 440: Hydrology at Humboldt State University for the analyzing the subbasin contributing to the peak flow of a river crossing in Shasta, CA. This crossing is near CA Highway 299 so the design specifications for the California Department of Transport are employed in this analysis. The objective of this report was to determine an adequate culvert for the river crossing.

Location: (40.59049, -122.48245)

Table of Contents

Summary Table of Methods	Sheet 1
Summary Table of Input Values	Sheet 1
GIS Figure of Watershed	Sheet 2
Table summarizing peak flow, volume, and culvert diameter	Sheet 3
Hydrographs for each subbasin and outlet	Sheet 4
Figure of outlet hydrograph for base case and uncertainty case	Sheet 5
Uncertainty Analysis	Sheet 5
Reflection	Sheet 6
Appendix	
Curve Number Calculations	Sheet 7

Lag Time Calculations

Sheet 8

Hydrograph data for both cases

Sheet 9-12

The A' in front of sheet titles 7-12 are to emphasize that they are in the Appendix
