Grade 11- Seijitsu

   The semester is almost over and my first thoughts about the overall projects that I've encounter are both negative and positive. Why negative and positive? Negative because there are so many projects that has given to us. And we really need to do our best so our teachers would be satisfied with our projects. And it is also positive because it helps me to learn more about ICT tools. By the help of ICT it makes our work easier. It's also my first time to know and how to use a blog. Blogging is really hard for me and also to write an article.

   In group projects or discussion, sometimes we misunderstand each other, some are also not participating. One of the most challenging moments I have encounter is to make a blog and video making. Video making is also hard for me because I really don't know how to edit a video. Editing is not my style. In terms of my problem I analyze it properly and immediately find a better solution for this. If I cannot do it alone I would approach my family, friends, etc. to help me instead. If some of group mates has a problem we need to listen one another and understand each other. And this kind of problem or situations really helps me a lot in real life to be more responsible on my act and not just by saying. And whenever someone needs help we need to help them.
