most

to some photos to use as a calibration I tried to make assumption that seem reasonable because of it being a proxy

test table results using ranges 200-300 130-200

photo name	resolution %	detector when in light did what it was or did not detect in shadow
empty	17.6065	N/A
eraser do see 1	22.1056	✓
eraser dont see 1	17.2431	X
eraser dont see 2	17.1057	X
eraser dont see 3	16.8244	X
paper do see	29.7769	✓
paper far	18.3565	X
paper just enter	21.9025	✓
eraser do see but close	29.7078	~

made a power point and put the test images in as well as the table data and some notes
