

Appropedia Ecovillages & Intentional Communities Energy and Climate Action Research Project

This open-source research project aims to collect, categorize, and catalog the best eco-village tools, techniques, and practices for achieving net-zero carbon emissions and long-term environmental and ecological stewardship.

You too can help to expand this database by submitting your own success stories and by sharing your questions and needs for problem solving. Ecovillages and intentional communities can and must accept the role of serving as proving grounds for all communities.
