

My Learning Experience During 2nd Semester

Website

In my second semester the first lesson or topic we talked about in our Empowerment technology (E-Tech) is making a Website, this is actually my first time making a website. This experience is exciting, I love making website, because of this experience I have now my new notebook but through technology. At first I was just excited to know how people would make their website and thought that it's hard but in reality it's just simple as 1,2,3 well... maybe the website that Sir Micheal teach us is just the simple one.

Graphic Design

I learned how to make a logo, poster, infographic and label for my future business. This experience is very dear to me because I love editing and I really enjoy doing this. Even though I know how to edit, this experience made me unlock new skills. Before, I just design and edit whatever comes into my mind but this needed to use my entire knowledge about being in a business so that I can relate or connect my edits to the theme. The graphic designs we made is also connected to my strand which is ABM.

My Webpage Compilation

After learning how to make a website the next one is to compile all the websites we made. In this we are taught how to compile and put the next and back button so that our websites will connect. It actually took me a lot of time since I keep making mistakes but in the end, I passed it.

Advocacy Video

The last one is the advocacy video, where we make of good use to the social media platforms to influence and promote something. My advocacy Video is about conserving energy because we really need to conserve energy. I realized that Social media is a very powerful platform since everyone is using it, it makes us do things in an easier way.

I experienced this all in my 2nd semester, It taught me a lot of things and help me grow as a person, it also helped me to unlock new skills that I never imagined that I can actually do it. I'm very thankful for these wonderful experience. From making websites to making a graphic design to compiling all my websites to making of use the social media platform to advocate.
