

Appropedia Ecovillages & Intentional Communities Energy and Climate Action Research Project

Community and Energy Transportation Solutions

1 Reduce the need for transportation

- Practice community design and land use planning to support walking, biking, and accessibility.
- Make options safe and practical for all ages and abilities.

2 Use energy saving modes of transportation

- Integrate with “public transportation”
- Use best-available construction materials for transportation infrastructure
- Twin Oaks Community (Virginia, USA) uses sharing systems for both cars and bikes.

3 Transition to carbon-free and carbon-negative fuel sources

- Transition to zero emission, renewable fuels and vehicles
- Use human-power for last-mile transport and delivery services

*Leave us your notes here,
about transportation questions you have
and about your solutions to share!*
