Re: Literature Review Section

The purpose of this memo is to describe and introduce our team's Section II, Literature Review. Attached to this document is the outlined and formatted version of our literature review section.

Our team designated review topics that each member was responsible for researching. Dillon Wilke was responsible for Drive Choices (belt drives, chain drives, and friction drives), Griffith Jones was assigned Energy Output and uses for Pedal Power and Fan Belts. Gordana Ilic had covered the sections on Functional Kitchen Appliances and Benefits/Savings. Josh Alexander researched and input information on the topics of Flywheels, Eco-hostel, and Stationary vs. Exercise Bicycles. Together our team formatted and fitted each topic and review section into one document that we now present to our instructor, Lonny Grafman. The documents attached are the results of our work.

Please use this information to provide helpful feedback to our team and use it as reference to our project work of Section II in project design.
